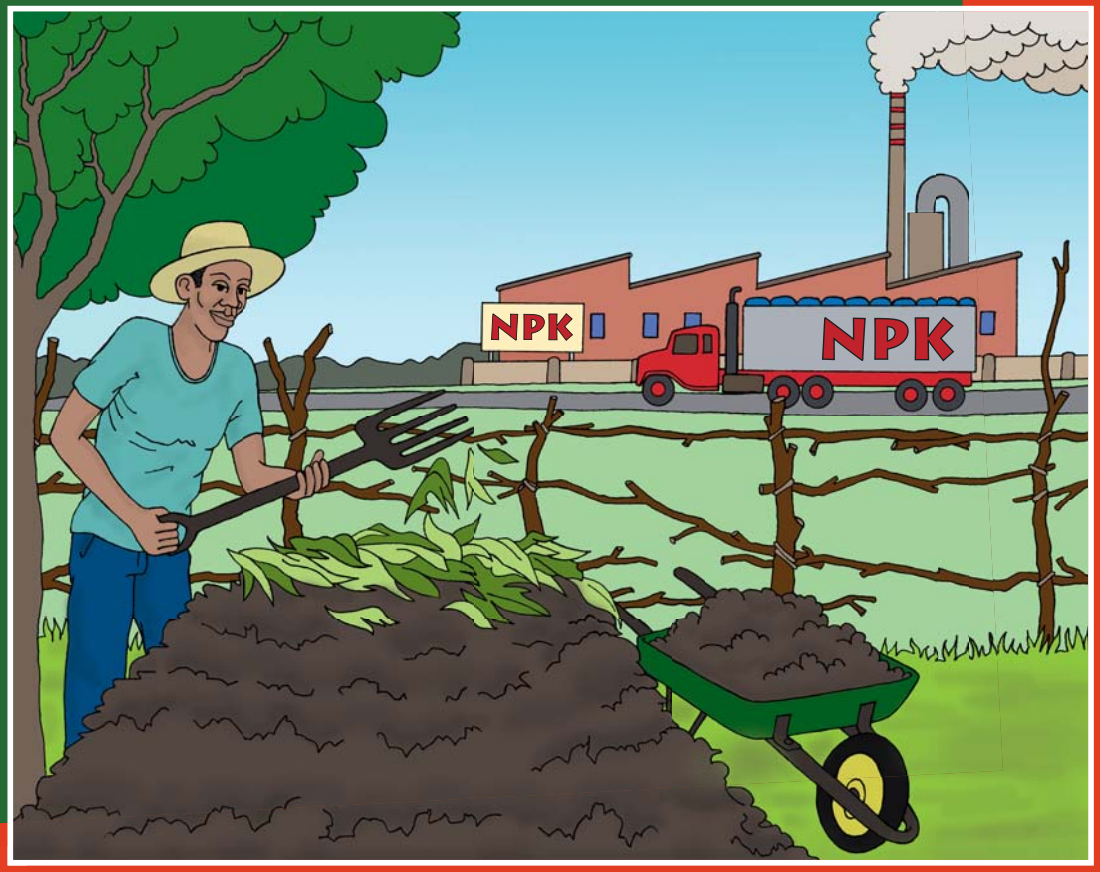
IZICHUMISI ZOOZENZELE?



duducoelho.com

Kukho intlobo ezimbini zezichumisi: ezeoganikhi (ezendalo) kwakunye nozenzele (ezenzwe ngabantu). Izichumisi zeoganikhi zivezwa zizinongo zendalo ezifumaneka kuko konke okusingqongileyo. Oozenzele bezichumsi bona benziwa ngemixube yeekhemikhali nezinongo ezingaphumi kwindalo.

Oozenzele bezichumisi –

- zivezwa kwimizi yeelaboratri okanye kwimizi mveliso engaphandle kwezifama ngokuhlanganisa izinongo ezifana nenitrojeni, ifosforasi, ikhalsiyamu, imagniziyam nezinye ngemilinganiselo eyahlukileyo;
- zisebenza ngokukhawuleza ngokuthi zibonelele izondlo ezibalulekiyo kumhlaba zifike zithathwe ngokukhawuleza zizityalo;
- ziveliswa ziphinde zipakishwe kwimizi mveliso; kwaye
- zigcinwa kwiikoyi zogcino zize zihanjiswe kubathengisis abahlukeneyo kwilizwe ngokubanzi.

Usetyenziso lwezichumisi zoozenzele lixatyiswe kakhulu ngoorhulumente baseAfrika ukonyusa imveliso. Oorhulumente abaninzi bakuxhasa ngokwezimali ukusentyenziswa kwezichumisi ezingo zenzele-ezinjengo NPK- oku kuyinxalenye lwenqubo yokuxhasa izifakwa kwezolimo.
